I. ACTUARIES' OPINION

The purpose of this Actuarial Valuation Report (Report/Valuation) is to determine the financial position of the Superannuation Adjustment Account (Account) of The Civil Service Superannuation Fund (CSSF or Fund) as at December 31, 2014, and the superannuation adjustment or cost-of-living adjustment (indexing) which can be granted effective July 1, 2015 according to the formula for the increase and the amounts available in the Account. Any increases in retirement pensions or increases in disability pensions are charged to the Account.

The long-term objective is to provide 20-year pre-funding of superannuation adjustments expected to be charged to the Account. At December 31, 2014, this objective had not been achieved.

Superannuation adjustments are granted on July 1 of a year to offset part of the increase in the cost of living that has occurred in the 12-month period ended December 31 of the previous year as measured by the change in the Consumer Price Index for Canada (CPI). The maximum increase, which can be presently granted under the terms of the Civil Service Superannuation Act (CSSA), is $\frac{2}{3}$ of the increase in the cost of living.

Effective January 1, 2000, the Civil Service Superannuation Board (Board) adopted a new method to credit interest to the Account to reflect the rate of return earned on the Fund, net of investment expenses and after reflection of any assets dedicated to the Account. As a result, an asset smoothing adjustment has been established to dampen the market fluctuations that are expected to occur in the future.

The increase in the CPI, which occurred during the 12 months ending December 31, 2014, is equal to 1.47%.

The amount of the superannuation adjustment a member receives is determined by multiplying the percentage increase approved by the Board by the total of the basic pension plus superannuation adjustments granted to date. The member's basic pension is the formula pension determined under the CSSA prior to any adjustment for an optional form of payment. A full superannuation adjustment is paid to those retired employees who began to receive a pension 18 months prior to the date of increase. A partial or interim superannuation adjustment is paid to those employees who retired or who otherwise became eligible for a pension during that same 18-month period.

We recommend that the superannuation adjustment, effective July 1, 2015, be made equal to no more than 0.98% ($\frac{2}{3}$ of 1.47%) of the total of the monthly pension which would be received currently if the normal form of pension had been elected, plus any previously granted adjustments in that pension.

We will be pleased to discuss this Report at your convenience.

Respectfully submitted,

ELLEMENT

2. ACTUARIAL VALUATION BALANCE SHEET: GOING CONCERN

The ability of the Account to finance any superannuation adjustment at July 1, 2015 is indicated by the relationship between:

- (a) the value of the assets allocated to the Account as at December 31, 2014 (audited draft financial statements were used for 2014 at the time of preparation of this Report), and
- (b) the present value of the going concern liabilities as at December 31, 2014, which the Account has as a result of the superannuation adjustments already granted.

Going Concern	<u>31-Dec-2014</u>	<u>31-Dec-2013</u>
<u>Assets</u>		
Value of Account	\$ 471,099,000	\$ 431,519,000
Asset Smoothing Adjustment (Note 1)	(31,668,600)	(28,929,460)
Unavailable portion of 1986 surplus transfer (Note 6)	(3,420,900)	(5,126,700)
Unavailable portion of 2004 surplus transfer (Note 7)	(146,366,600)	(141,254,600)
Total Assets	<u>\$ 289,642,900</u>	<u>\$ 256,208,240</u>

Provision for future Adverse Experience (PfAD)	-	6,799,949
Total Liabilities	<u>\$ 234,072,300</u>	<u>\$ 217,833,000</u>
Amount available to finance future superannuation adjustments	<u>\$ 55,570,600</u>	<u>\$ 38,375,240</u>

Audited draft financial statements were used for 2014 at the time of preparation of this Report.

The long-term objective is to provide 20-year pre-funding of superannuation adjustments expected to be charged to the Account. If the amount in the Account is insufficient to provide for 20-year pre-funding, then the maximum increase in superannuation allowances is limited to 2/3 of the increase in the CPI.

This 20-year objective is estimated to require about \$808,423,600 (increases significantly, if indexing beyond 20 years is also reflected), at a 2.00% indexing level, to be available in the Account as at December 31, 2014. The “long-term” amount available was equal to \$205,358,100 (\$55,570,600 + \$3,420,900 + \$146,366,600) at that date, as indicated above. As a result, the long-term objective of 20-year pre-funding of indexing had not been achieved as at December 31, 2014.

3. ACTUARIAL VALUATION BALANCE SHEET: SOLVENCY TEST

The Account is exempt from the solvency funding requirements under the Manitoba Pension Benefits Act.

However, the Canadian Institute of Actuaries (CIA) requires that the actuary comment on the financial position of the Account should it be wound up at the actuarial valuation date and pensions be purchased at a suitable insurance carrier. The following provides the required CIA disclosure.

Solvency Test	31-Dec-2014	31-Dec-2013

Audited draft financial statements were used for 2014 at the time of preparation of this Report.

4. COST OF JULY 1, 2015 SUPERANNUATION ADJUSTMENT

Superannuation adjustments are presently limited by the terms of the CSSA to 2/3 of the increase in the CPI during the 12-month period ended December 31 of the year prior to the date of increase. The CPI (2002=100) was 122.7 on December 31, 2013 and 124.5 on December 31, 2014. This indicates the cost of living increased by 1.47% during the period.

The full superannuation adjustment is paid to those retired employees or other persons who became entitled to receive a pension prior to December 31, 2013. Partial or interim superannuation adjustments are paid to members and other persons whose pension commenced after December 31, 2013. These superannuation adjustments are percentages of the full superannuation adjustment. The table of applicable percentages is shown in Note 5 of this Report.

The cost of granting 0.98% or 2/3 of 1.47%, on July 1, 2015 is equal to \$24,934,600 as at December 31, 2014.

5. OPERATION OF THE ACCOUNT

The Account was established by an amendment to the CSSA, which became effective on July 1, 1977. The purpose of the Account is to finance the Fund's share of increases in superannuation allowances granted as a result of increases in the cost of living after January 1, 1976. On July 1, 1977, \$3,000,000 of the Fund was allocated to the Account. The operation of the Account is determined as follows:

- (a) credit 10.20% of the employees' (plus matching employers') contributions for the year,
- (b) credit interest on the average balance in the Account,
- (c) charge 50% (100% for matching employers) of the superannuation adjustments granted (ensure that 100% of the adjustments in respect of the pension formula improvement made effective September 1, 2000 are charged), and
- (d) credit/charge special transfers to/from the Account authorized by amendments to the CSSA, and events such as the MTS privatization.

The following is a summary of the operation of the Account:

Year	Contributions	Interest Credits	Adjustment Payments	Special Allocations	Closing Balance	Rate of Return

6. ANALYSIS OF GOING CONCERN RESULTS

The financial position of the Account as at December 31, 2014 can be reproduced if the amount available to finance future superannuation adjustments as at December 31, 2013 is adjusted to recognize the various changes in the financial position which occurred during 2014. This procedure is demonstrated in the following schedule on both a going concern and solvency test basis:

Going Concern		Liabilities &	Amount
2014 Operation	Assets	Reserves	Available
Opening Balance	\$ 431,519,000	\$ 393,143,760	\$ 38,375,240
Contributions/2014 Indexing	16,497,000	19,494,100	(2,997,100)

7. ANALYSIS OF RESULTS - SOLVENCY TEST

The solvency test interest rate assumption for annuity purchases has decreased by 1.42% from 3.89% to 2.47%. The solvency test interest rate assumption less than 10 years for cash settlements has decreased by 0.50% from 3.00% to 2.50%, and the greater than 10 year solvency test interest rate has decreased by 0.80% from 4.60% to 3.80%.

Pursuant to the Standards of the Canadian Institute of Actuaries (CIA) it is now required to disclose the incremental cost in the next year on a hypothetical wind-up/solvency basis. This cost is estimated to be equal to \$24,932,800 as at December 31, 2014. This cost in essence reflects the present value of the increase of the solvency liabilities in the next year plus the annual benefit payments expected to be made.

8. SENSITIVITY TEST (DURATION)

The impact on pension liabilities of changes in the actuarial assumptions depends largely upon the number of years over which benefits will be paid and the exact pattern of the expected benefit cash flow. The demographics of the group covered by a valuation have an impact on the resulting change in liability for a given change in an actuarial assumption. Different parts of the valuation are affected differently by a change in a specific valuation assumption. Two of the more significant assumptions are the real rate of return and the assumed inflation rate expected in the future. There are rules of thumb to estimate the effect upon liabilities of a change in the assumed real rate or assumed inflation rate. These rules of thumb can be expressed mathematically by introducing the concept of duration where:

$$\% \text{ change in liability} = - \text{duration} \times \% \text{ change in assumed rate}$$

The approximation is usually quite good for small changes in the assumed rate (we will test a negative 1/4% change). The following table summarizes the application of the above formula to the Account data as at December 31, 2014.

Note 2: MEMBERSHIP

The following membership information used in this Report was provided by the staff of the Board.

Pensions in Payment	31-Dec-2014	31-Dec-2013
Pensioners	16,580	16,028
Survivors	2,936	2,888
Total	19,516 *	18,916

(* The 19,516 is different than the pensions in payment count found in the Statistical Report provided by the staff of the Board as it includes some retirements in early 2015 which were included at the time of the preparation of this Report).

Note 3: ACTUARIAL ASSUMPTIONS - GOING CONCERN

The mortality rates use the CPM2014PUBLIC table projected with Scale B and the liability interest rate continues at 5.50% per year. The difference between the Actuarial Valuation Report of the Basic Fund and this Report on the Account is largely attributable to the differences in the demographic profile and asset mix supporting the liabilities of the Account versus those of the Basic Fund.

Note 4: ACTUARIAL ASSUMPTIONS - SOLVENCY TEST

The Canadian Institute of Actuaries prescribes the mortality and interest rates to be used to perform the solvency test (hypothetical wind-up) calculations. For this Report, the prescribed mortality table is UPXGEN (previously UPXGEN) and the prescribed liability interest rate is 2.47% (previously 3.89%) per year as at December 31, 2014. No future indexing has been included in solvency calculations as indexing is only available if the Account has a solvency excess.

Note 6: **1986 SURPLUS TRANSFER AMORTIZATION**

The initial unamortized amount of \$23,632,210 is the portion of the \$31,788,810 surplus as at December 31, 1986 transferred to the Account that is not immediately available to provide superannuation adjustments. It is to be made available or amortized gradually as new retirements occur after 1986.
