- I Financial & Membership Data
- II Summary of the Plan
- III Actuarial Assumptions

I. ACTUARIES' OPINION

This Actuarial Valuation Report (Report/Valuation) has been prepared to determine the funding requirements of the Civil Service Superannuation Fund (Fund) and present the results of the Report on a going concern and solvency test (wind-up) basis, as at December 31, 2017 (Valuation Date), and the adequacy of the contributions being paid to finance basic benefits and pay expenses. This Valuation concerns itself with the basic portion of the benefits (Basic Account) financed by the Fund as defined under the Civil Service Superannuation Act (Plan or CSSA) as at December 31, 2017. A separate report is prepared on the Superannuation Adjustment Account (Indexing Account) which is responsible for indexing of pensions on and after July 1, 1977, and separate employer reports on the portion of the benefits not financed by the Fund.

Actual going concern experience, in total, has been more favourable than expected during 2017. In the future, there will be periods when actual experience is more favourable than expected and other periods when actual experience is less favourable than expected, resulting in future gains and losses. The Fund self-insures all benefits and therefore is exposed to investment and demographic risks which must continue to be monitored in the future. Benefits may alternatively be purchased at an insurance carrier to eliminate a portion of these risks. In the future, an asset liability method that is more closely aligned with all or a portion of the liability structure may be considered. This strategy may be cost effective in an appropriate economic climate and should be reviewed on an on-going basis by the Civil Service Superannuation Board (Board).

In our opinion, for the purposes of this Report:

- The financial and the membership data (Appendix I) on which the Valuation is based are sufficient and reliable for the purpose of the Valuation. The total membership counts shown in the Report are different from the amounts reported in the General Manager's Report due to additional new entrants, retirements, disablements, terminations, and deaths following December 31, 2017 that were provided by the Board's staff.
- The benefits used in the calculations are based on the Plan as amended to December 31, 2017 (Appendix II).
- The assumptions and the methods which have been used in this Valuation are appropriate for the purpose of determining the financial position of the Fund and the funding requirements of the Fund on a going concern basis and on a solvency test (wind-up) basis (Appendix III).
- The value of the Fund's assets would be less than the actuarial liabilities if the Fund had been hypothetically wound up on the Valuation Date (solvency test). The solvency test is provided for information only as the Plan is exempt from the funding requirements of the solvency test pursuant to Paragraph 4.5(2)(b) of the Regulations to the Manitoba Pension Benefits Act. However, the Canadian Institute of Actuaries (CIA) requires that the wind-up disclosure calculations be performed as part of accepted actuarial practice.
- Asset and liabilities have been rounded to the nearest dollar in this Report. In the Subsequent Events section of this Report - Page 10, we nevertheless describe the uncertainty implicit in the actuarial calculations. Due to the limited scope of our engagement, other than interest discount sensitivity analysis on Page 8, an analysis of the potential range of future measurements of the Plan's financial health due to alternative actuarial assumptions, future Plan experience, or changes in legislation was not performed.
- Contribution rates in respect of future service were increased by a total of 2.00% of salary (2012-2015), however, no program of contribution increases has been established to eliminate the deficit in respect of past service at this time (refer to Contribution Requirements - Page 5 and Subsequent Events - Page 10).

We hereby certify that, in our opinion, the assets of the Fund, together with future investment income, and the current contribution levels, are inadequate to provide the benefits promised by the Fund, in respect of service completed up to the Valuation Date based on the actuarial assumptions and methodology used in this Report. Without the necessary contribution increases and/or favourable future experience, assets will not be sufficient to provide the benefits. Contribution increases have been recommended in the past and should be considered in the near future if the deficit persists. It is essential that the investment and demographic experience continue to be monitored to evaluate changes in the financial health of the Plan and recommend appropriate actions.

This Valuation has been prepared and this opinion has been given in accordance with accepted actuarial practice in Canada.

This Valuation is subject to approval by the appropriate regulatory authorities. It is recommended the Board continue to monitor the inadequacy of the contribution rates, so that it may ensure the financial health of the Fund, and assist in meeting the increased accounting standards that are now required. The next Valuation is recommended to occur as at December 31, 2018.

Dennis Ellement, FSA, FCIA
Winnipeg, Manitoba June 15, 2018

Brandon Ellement, FSA, FCIA

2. EXECUTIVE SUMMARY

GOING CONCERN VALUATION	31-Dec-2017	31-Dec-2016

* The solvency test is provided for information only as the Plan is exempt from the funding requirements of the solvency test pursuant to Paragraph 4.5(2)(b) of the Regulations to the Manitoba Pension Benefits Act. However, the Canadian Institute of Actuaries (CIA) requires that the wind up disclosure calculations be performed as part of accepted actuarial practice.

5. CONTRIBUTION REQUIREMENTS

The accrued benefit cost method of valuation, with salary projection, has been used in this Valuation. Under this method, the expected cost in each year after the valuation date is equal to the cost of benefits expected to be credited for service in the next year. This expected cost is expressed as a level percentage of salary each year. These percentages are commonly called the theoretical contribution rates or normal actuarial cost for basic benefits.

In the following table, we have compared the required contribution rates and the normal actuarial cost for basic benefit rates (below/above Canada Pension Plan Earnings (CPPE)) on the basis of age, sex, and salary distribution, as exists for present active participants (refer to Appendix II - Page 2).

		2018		2017		
		< CPPE / ≥ CPPE *		< CPPE / ≥ CPPE

* Current contributions are represented as a percentage of earnings below/above the Canada Pension Plan Earnings (CPPE).

In respect of past service, it is recommended that the Province of Manitoba, the Liaison Committee, and the Advisory Committee be informed that the current going concern unfunded liability of \$689,039,664 could be amortized by 15 annual payments of \$76,724,437 (assumes 10.2% is allocated to the Indexing Account) which is equivalent to about 3.78% of salary over the next 15 years. Although the Plan is exempt from the regulatory going concern and solvency funding, the parties must be made aware that it may become a requirement if future excess investment and/or demographic experience is not generated in the Fund.

■ 2017 Closing Going Concern Position: 2017 Basis	\$ 4,607,211,000	\$ 5,114,462,781	\$ (181,787,883)	\$ (689,039,664)

7. ANALYSIS OF RESULTS - SOLVENCY TEST

- The solvency test interest rate assumption for annuity purchases has decreased by 0.10% from 3.12% to 3.02%. The solvency test less than 10-year interest rate assumption for cash settlements has increased by 0.40% from 2.20% to 2.60%, and the solvency test greater than 10-year interest rate assumption for cash settlements has decreased by 0.10% from 3.50% to 3.40%. Overall, after reflecting experience and the assumption changes, this has resulted in an overall blended increase in solvency liabilities.
- Pursuant to the Standards of the Canadian Institute of Actuaries, it is now required to disclose the incremental cost in the next year on a hypothetical wind-up/solvency basis. This incremental cost is estimated to be equal to \$296,971,118 as at December 31, 2017. This incremental cost in essence reflects the present value of the estimated increase in solvency liabilities in the next year plus the annual benefit payments expected to be made.

8. FUND BASIC BENEFIT LIABILITIES EMPLOYER PROFILE

Name of Employer	Code	Active Participants	Other Participants	Pensions in Payment	2017 Total	%

9. SENSITIVITY TEST (DURATION)

The impact on pension liabilities of changes in the actuarial assumptions depends largely upon the number of years over which benefits will be paid and the exact pattern of the expected benefit cash flow. The demographics of the group covered by a valuation have an impact on the resulting change in liability for a given change in an actuarial assumption. Different parts of the valuation are affected differently by a change in a specific valuation assumption. Two of the more significant assumptions are the real rate of return and the assumed inflation rate expected in the future. There are rules of thumb to estimate the effect upon liabilities of a change in the assumed real rate or assumed inflation rate. These rules of thumb can be expressed mathematically by introducing the concept of duration where:

$$\% \text{ change in liability} = - \text{duration} \times \% \text{ change in assumed rate}$$

The approximation is usually quite good for small changes in the assumed rate (we will test a negative ¼% change). For larger changes, the concept of convexity must be introduced which we will not explore in this Report. The following table summarizes the application of the above formula to the Fund data as at December 31, 2017.

GOING CONCERN			Decrease Real Rate ¼%		
Real Rate	4.00%		3.75%		
Inflation Rate	2.00%		2.00%		
Nominal Rate	6.00%		5.75%		
Mortality	CPM2014PUB-Scale B		CPM2014PUB-Scale B	% Change in	Estimated
Liability Category	Liability		Liability	Liability	Duration
Active Participants	\$ 2,217,857,295		\$ 2,320,892,277	4.65%	18.58
Other Participants	152,126,046		156,245,152	2.71%	10.83
Pensions in Payment	2,744,479,440		2,807,125,284	2.28%	9.13
Adjustments	181,787,883		181,787,883	-	-
Surplus/(Unfunded)	(689,039,664)		(858,839,596)	-	-
Total	\$ 4,607,211,000		\$ 4,607,211,000	3.21%	12.82
Increase/(Decrease) in Liabilities			\$ 169,799,932		

SOLVENCY TEST			Decrease Real Rate ¼%		
Cash Settlements 1st 10 years	2.60%		2.35%		
Cash Settlements thereafter	3.40%		3.15%		
Annuity Purchases	3.02%		2.77%		
Mortality	CPM2014COM-Scale B		CPM2014COM-Scale B	% Change in	Estimated
Liability Category	Liability		Liability	Liability	Duration
Active Participants	\$ 2,895,393,541		\$ 3,048,998,862	5.31%	21.22
Other Participants	195,619,971		203,587,218	4.07%	16.29
Pensions in Payment	3,700,479,779		3,805,788,695	2.85%	11.38
Adjustments	23,036,000		23,036,000	-	-
Excess/(Deficiency)	(2,207,318,291)		(2,474,199,775)	-	-
Total	\$ 4,607,211,000		\$ 4,607,211,000	3.92%	15.67
Increase/(Decrease) in Liabilities			\$ 266,881,484		

10. PROVISION FOR FUTURE ADVERSE DEVIATIONS (PfADs)

The actuarial assumptions must be, individually and in aggregate, appropriate for the purpose of the Valuation. The assumptions are the sum of the actuarial best estimate plus a PfAD.

Asset Smoothing Adjustment

An asset smoothing adjustment to buffer past and possible future adverse investment experience has been utilized for this Report and is equal to \$181,787,883 on the going concern Valuation Balance Sheet (please refer to Appendix III - Page 3). This reserve is a write-down of assets for this Valuation which may or may not mitigate in full, or in part, past and possible future adverse investment experience. No such adjustment was made for the solvency test.

Contingency Adjustment

A contingency adjustment provides for the possibility of future adverse investment and/or demographic experience. There is no explicit contingency adjustment on the going concern or solvency test balance sheets.

Assumed Rate of Return

Currently, there is no PfAD contained implicitly in the assumed rate of return of 6.00% per year (please refer to Appendix III - Page 4 for further detail). The absence of provision may or may not prove to be adequate in the future. Consideration should be given to lowering the current real rate of 4.00% per year in the future.

Salary Increase Rate

The assumed salary rate increase is equal to 2.75%, before service and merit increases.

Retirement Rate

Current expected retirement rates allow for higher retirements than the best estimate of actual retirement experience to date. Given the large number of “baby boomer” retirees expected in the near future, these rates may or may not prove to be adequate. Continued monitoring of retirement experience should occur.

Mortality Rate

The most current CPM 2014 Composite Mortality projected using Scale B (CPM2014COM-Scale B) was used for the solvency test. The CPM 2014 Public Mortality projected using Scale B (CPM2014PUB-Scale B) has been continued for the going concern calculations in this valuation.

Indexing Contingency

No provision for indexing has been made on the going concern Valuation Balance Sheet other than for existing deferred pensioners (1.33% per year in the deferral period). A separate report is prepared on the Indexing Account that makes some provision for indexing of pensions in payment.

Contribution Deficiency Contingency

No provision for a contribution deficiency has been made on the going concern Valuation Balance Sheet as the contribution rates are currently in balance for future service accruals.

No contribution schedule has been established to eliminate the past service deficit at this time.

II. SUBSEQUENT EVENTS

- This Valuation does not reflect the change in the going concern or solvency test interest rates after the Valuation date, nor is it required. A valuation report is a snapshot of a plan's estimated financial condition at a particular point in time; it does not predict the pension plan's future financial condition or its ability to pay benefits in the future.

Over time, the Plan's actual cost will depend on a number of factors, including the level of the benefits in the Plan, the number of individuals' paid benefits, the amount of Plan expenses, and the amount earned on any assets invested to pay the benefits. These amounts and other variables are uncertain and unknowable at the valuation date.

To prepare this Report, actuarial assumptions, as described in Appendix III, are used to select a single scenario from the range of possibilities. The results of that single scenario are included in this Report. However, the future is uncertain and the Plan's actual experience will differ from those assumptions; these differences may be significant or material. In addition, different assumptions or scenarios may also be within the reasonable range and results based on those assumptions would be different. Actuarial assumptions may also be changed from one valuation to the next because of changes in regulatory requirements, plan experience, changes in expectations about the future and other factors.

Because actual Plan experience will differ from the assumptions, decisions about benefit changes, investment policy, funding amounts, benefit security and/or benefit-related issues should be made only after careful consideration of alternative future financial conditions and scenarios, and not solely on the basis of a valuation report or reports.
- In respect of future service, contribution rates of employees and matching employers to the Basic Account were increased to eliminate the contribution deficiency so that future benefit accruals do not cause an unfunded liability in the Fund. A small future service contribution margin now exists but should be monitored closely, especially if a more cautious actuarial basis is adopted or if the average age of the actives increases significantly in the future.
- In respect of past service, it is recommended that the Province of Manitoba, the Liaison Committee, and the Advisory Committee be informed that the current going concern unfunded liability of \$689,039,664 could be amortized by 15 annual payments of \$76,724,437 (assumes 10.2% is allocated to the Indexing Account) which is equivalent to about 3.78% of salary over the next 15 years. Although the Plan is exempt from the regulatory going concern and solvency funding, the parties must be made aware that it may become a requirement in the future if future excess investment and/or demographic experience is not generated in the Fund.
- Any contribution increase to employees in excess of 9.00% (on a blended basis) of salary will require the approval of the Canada Revenue Agency to ensure continued tax deductibility of such employee contributions.
- In the fall, a projection valuation will be presented to the Board to examine future financial outcomes for the Civil Service Superannuation Fund under a number of scenarios.
- We are not aware of any other matters or subsequent events occurring since the completion of this Report which would materially adversely affect the financial position as at December 31, 2017.

APPENDIX I

Financial & Membership Data

I. Total Assets Available for Basic Benefits (Source: Audited Financial Statements)

	31-Dec-2017	31-Dec-2016
Assets		
Fixed Income Investments (market value)	\$ 1,574,284,000	\$ 1,517,264,000
Equity Investments (market value)	5,987,263,000	5,560,394,000
	<u>\$ 7,561,547,000</u>	<u>\$ 7,077,658,000</u>
Net Receivables/Payables (includes a Province Trust Account) (Note 5)	5,179,000	4,542,000
Debt due from the Province of Manitoba (Note 1)	1,826,000	1,826,000
Correctional Officers' Trust Account (Note 2)	(12,316,000)	(10,424,000)
Employer Trust Accounts (Note 3)	(101,854,000)	(92,088,000)
Money Purchase Accounts Plan (Note 4)	(39,520,000)	(36,618,000)
The Province of Manitoba Unfunded Pension Liability Trust Account 1 & 2 (Note 5)	(2,217,480,000)	(2,077,951,000)
Manitoba Hydro Enhanced Benefit Trust Account (Note 6)	<u>(31,190,000)</u>	<u>(26,874,000)</u>
	<u>\$ 5,166,192,000</u>	<u>\$ 4,840,071,000</u>
Superannuation Adjustment Account	<u>(558,981,000)</u>	<u>(516,199,000)</u>
Total Assets Available for Basic Benefits	<u><u>\$ 4,607,211,000</u></u>	<u><u>\$ 4,323,872,000</u></u>

Note 1: Under Section 24(1) of the CSSA, the Province of Manitoba assumed an accrued liability of \$1,826,000 for its employees and pensioners as at May 1, 1939. The Province of Manitoba pays semi-annual interest at 4.00% per annum on this amount.

Note 2: Effective November 19, 1996, employees who are members of the Province of Manitoba's Corrections Component are required to contribute an additional 1.00% of pensionable earnings. These additional contributions, which are credited to this trust account, are intended to fund the additional pension benefits for eligible employees who may retire as early as age 50 with no reduction for early retirement providing age and qualifying service is equal to a total of 75 or greater.

Note 3: The Fund is responsible for providing enhanced benefits enacted in the 1992 legislation agreed to by the Employee Liaison Committee and the Employer Pension Advisory Committee. These benefits are 100% financed from the Fund's net assets available for benefits. To facilitate this funding, trust accounts were established for most employers participating in the Fund for their share of the actuarial valuation of these future benefit enhancements. Specific contributions from eligible employees are being transferred to the applicable trust account.

Note 4: Effective January 2, 1985, a separate Money Purchase Accounts Plan was established to enhance the portability of pensions. Contributors include employees, recipients of superannuation allowances, annuities, or pensions payable under the CSSA, or persons on whose behalf the Board is required or requested to transfer moneys to this Plan. Refunds are made upon written request by the contributor. Administrative costs are recovered by the Board.

Note 5: The Province of Manitoba has established a fund for the purpose of accumulating funds for the eventual retirement of the Province of Manitoba's unfunded pension obligation. Under the terms of March 6, 2001 and March 30, 2009 agreements between the Province of Manitoba and the Board, the Province of Manitoba established funds with the Board and the Province of Manitoba to which it is making the required payments to these funds. As well, the Province of Manitoba is making payments to this fund that are related to the Special Operating Agencies' unfunded pension liabilities. Payments received by the Board from the Province of Manitoba are held by the Board in trust for and on behalf of the Province of Manitoba and are invested by the Board on behalf of the Province of Manitoba. The payments received are not assets of the Plan and accordingly, they are accounted for by the Fund in the Unfunded Pension Liability Trust Accounts. These trust accounts earn investment income at a rate of return equal to the rate of return earned by the Fund. The Board receives an investment management fee for its services. The payments made by the Province of Manitoba to the Board do not reduce the accrued pension benefit obligations of the Fund. The Trust Agreements have been recently amended to make the trusts irrevocable. Accordingly, the assets in the Trust Accounts cannot be used for any purposes other than to fund the payments of pension benefits for which the Province of Manitoba is responsible and to pay the costs and expenses that are directly attributable to the administration of the Trust Accounts. In October 2007, The Financial Administration Act was amended to allow for withdrawals from the fund to pay, or fund the payment of, pension benefits for which the Province of Manitoba is responsible.

Note 6: Effective January 1, 2012, Manitoba Hydro employees with pensionable service after May 31, 2006 are eligible for an additional benefit. The Enhanced Hydro Benefit Plan enhances the formula used in calculating pension benefits from 1.6% to 1.7% of earnings up to the Canada Pension Plan average Yearly Maximum Pensionable Earnings at the time of retirement. Manitoba Hydro will fund the enhanced pension benefit through contributions to a trust account that will be used to fund the additional benefit to employees.

2. Asset Mix Distribution

	31-Dec-2017			31-Dec-2016		
1. Short Term (S-Term)	\$ 53,997,000	0.71%		\$ 72,366,000	1.02%

31-Dec-2017

31-Dec-2016

To limit the exposure to interest rate fluctuation and to obtain the best possible return at an acceptable risk, the Board amended the long-term investment asset mix policy to be currently about 27% fixed income and 73% equity.

3. Historical Cash Flow: 79 Years (Basic Account and Indexing Account)

- * Some numbers in 1958, 1959, and 1964 were estimated. 1946 is an 11-month "year", and 1965 is a 9-month "year". (Adjusted Book Value" 1939-1990 | Market Value: 1991-2007). In 1948, 1951 and 1952 transfers to reserves for possible future losses on account of investment principal were made, and special adjustments under the CSSA occurred.
- ** Years 1939 to 1945 commenced on May 1, years 1946 to 1964 commenced on April 1. Thereafter, calendar years are reported.
- *** The large decrease in assets in 1997 was due to the privatization of MTS.
- **** Rates of return are arithmetical and are calculated on the basis of mid-year cashflow.
The volatility in recent asset values is due to the Auditor's requirement that market values be reported. Previously, adjusted book values were used. The Valuation Balance Sheet separately reflects a smoothing asset adjustment reserve to partially mitigate or neutralize this volatility.
- *****The contributions for 2014 include the entry amount for employer liability funding equal to \$59,672,000 (including indexing).

- The active participant average monthly pension which is the responsibility of the Fund has been estimated from salary and service data as these participants have not yet retired, disabled, terminated, or died and therefore have not had their pension determined explicitly by the Board.
- The total membership counts shown in the Report are different from the amounts reported in the General Manager's Report due to additional new entrants, retirements, disablements, terminations, and deaths following December 31, 2017, that were provided by the staff of the Board.
- This Report is in respect of Fund obligations. The Fund average monthly pension has been shown above which represents approximately 55% of the total pensions paid to participants prior to reflecting indexing. Additional information is shown on the following pages that detail Fund pension amounts as well as the pension amounts payable outside the Fund by the Indexing Account and the pay-as-you-go employers. The valuation of the obligations not belonging to the Fund is reported separately.

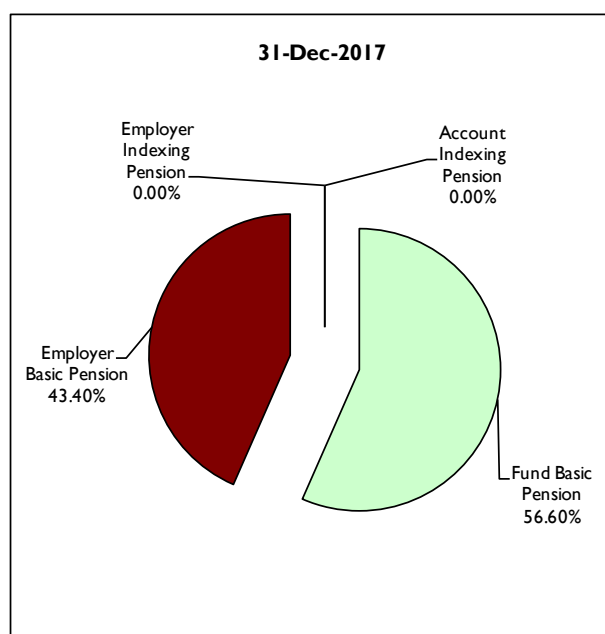

5. Active Participants Age Profile (This Report is in respect of Fund obligations only. Employer in the information below refers to pay-as-you-go employers. The Fund includes matching employer pension information.)

12. Data Checks (Source: Staff of the Civil Service Superannuation Board)

- Active Participants: An electronic file which provided information for each active participant as at December 31, 2017. Details of the information provided included: employer code, social insurance number, employee number, sex, date of birth, date of entry into the Fund, full-time annual salary at December 31, 2017, salary rate at December 31, 2017, the proportion of 2017 worked, qualifying service, required employee contributions and total interest on these contributions accumulated to the valuation date. In addition, average monthly pension at the valuation date, including retroactive salary increases, was provided, split between onside, LTD and other offside amounts. Any reductions in pension as a result of marriage break-up cases, which have been processed, were also provided. We had available copies of prior Actuarial Valuation Reports on the financial position of the Fund.

The file was checked for missing information and illogical information.

- Pensions in Payment: An electronic file which provided information for each pensioner as at December 31, 2017. Details of the information provided included: employer code, name, social insurance number, sex, date of birth, date of commencement of pension, type of pension, and amount of monthly pension. For each pensioner, the portion of the pension charged to the Fund, now and in the future, was also provided. Similar information was provided for each beneficiary or potential beneficiary.

The pensioner information was provided in 67,399 separate records (trailers) in respect of the 21,589 pensions in payment, which gave details on the pension payable from various sources.

DATA CERTIFICATE

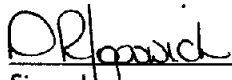

with respect to

The Civil Service Superannuation Fund

forming part of

The Actuarial Valuation Report as at December 31, 2017

I hereby certify that, to the best of my knowledge and belief, the data on which the valuation is based is a complete and accurate representation of all persons at the valuation date who are entitled to benefits or will become entitled to benefits under the terms of the Civil Service Superannuation Act (CSSA). It is appropriate to value the benefits of these persons in accordance with the provisions of the CSSA at the valuation date.

Signed

Director, Client Services Administration

Summary of the Plan

The calculations in this Report are based on the Civil Service Superannuation Act (CSSA) as amended to the valuation date. The Civil Service Superannuation Board (Board) is responsible for administering the CSSA. The Fund is a contributory defined benefit final pay pension plan that covers eligible employees of the Province of Manitoba and its participating Agencies. The following is a brief summary of the benefits as they existed at the valuation date. For a more complete description of the benefits, reference should be made to the CSSA.

I. Effective Date:

The Board and Fund were established under the CSSA in May, 1939.

2. Recent Changes:

In 2014, Manitoba Liquor Control Commission, after its amalgamation with Manitoba Lotteries Corporation, became a matching employer and paid to the Fund its unfunded employer benefit obligations.

Contribution rates to the Plan were increased over a four year period (2012 – 2015) until the contribution rates are 2% higher than they were previously. The increased contributions are not intended to provide increased pension benefits, but are necessary to fund existing benefits in the future.

Effective May 31, 2010, the Manitoba Pension Benefits Act was amended to provide immediate vesting (previously 2 years of service required) which has been reflected in this Valuation. Other changes dealing with the payment of commuted values, interest credits, marriage breakups, etc. are not expected to have a material cost to the Plan.

Effective January 1, 2001, the employee contribution rate will be 6.0% of pensionable earnings up to Canada Pension Plan (CPP) maximum pensionable earnings and 7.0% of pensionable earnings above the CPP maximum each year. On pensionable earnings up to the CPP maximum, the matching employer contribution rate remains the same at 5.1%.

Effective September 1, 2000, the CSSA was amended to provide benefit improvements. The most significant benefit improvement was to amend the pension formula to increase the pension benefits payable effective September 1, 2000 from 1.4% to 1.6% of average earnings below the average CPP maximum. There were also changes to buy back provisions respecting pensionable service as well as to other administrative matters. The cost of these benefit improvements will be funded by the Fund and by an increase in employee contribution rates.

Employer Billings: Effective January 1, 1998, pursuant to subsection 22(11) of the CSSA, employer funding for employees of more than one non-matching Agency shall be on a pro-rata basis in accordance with the portion of the amount paid or transferred to the employee in respect of which no employer matching contributions were made effective for events on or after January 1, 1998.

Correctional Officers Rule of 75: Effective November 19, 1996, employees who are members of the Province of Manitoba's Corrections Component are required to contribute an additional 1.00% of pensionable earnings. These additional contributions, which are credited to the Correctional Officers' Trust Account, are intended to fund the additional pension benefits for

eligible employees who may retire as early as age 50 with no reduction for early retirement providing age and qualifying service are equal to a total of 75 or greater.

3. Eligibility:

Each full-time employee of the Province of Manitoba or an Agency immediately begins to participate in the Fund.

Each part-time, temporary or term employee must become a participant upon completing 2 consecutive years of employment in which salary exceeds 25% of the Year's Maximum Pensionable Earnings as defined in the Interpretation Section of the Canada Pension Plan. Any such employee has the option to participate in the Fund any time after employment commences.

4. Contributions:

The Fund is financed by contributions required to be made by employees who are participants in the Fund and by participating employers.

Recently, a contribution rate was changed to the Plan to increase the rates by 2.00% of salary (matched by employers).

The rates of required contributions for employees who are participants in the Fund are scheduled as follows:

For pay periods ending:	Contribution rate on salary up to CPP earnings	Contribution rate on salary over CPP earnings
before July 1, 2012	6.00%	7.00%
on or after July 1, 2012 but before 2013	6.50%	7.50%
in 2013	7.00%	8.00%
in 2014	7.50%	8.50%
after 2014	8.00%	9.00%

In accordance with the CSSA, 10.2% of the contributions are allocated to the Indexing Account.

Some of the participating employers are "matching" the contributions made by their employees. The remaining employers are financing their portion of benefits on a pay-as-you-go basis. Correctional Officers are required to contribute an additional 1.00% of salary.

5. Pension Formula:

The lifetime pension formula equals:

- 2.00% of a member's best 5-year average pensionable earnings multiplied by pensionable service, minus
- .4% of the average Canada Pension Plan's earnings for the same period multiplied by pensionable service since January 1, 1966.

The lifetime pension is subject to an overall maximum of 70% of the average earnings. Some pensions for members retiring prior to age 60 are subject to an early retirement reduction.

6. Retirement:

A participant receives an unreduced pension if such a participant retires on the last day of the calendar year in which the member attains age 71; on or after age 65 with one year of qualifying service; on or after age 60 with 10 years of qualifying service; or on or after age 55 if age plus qualifying service is equal to 80.

A participant is eligible to receive a reduced pension if such a participant retires on or after age 55 having completed 10 years of qualifying service. The 10-year service requirement has been eliminated after May 31, 2010.

Eligible members of the Province of Manitoba's Corrections Component may retire as early as age 50 if their age plus qualifying service total 75 or more.

The pension is paid for as long as a retired participant lives. If the participant dies before the total of the pension payments is at least equal to the participant's contributions with interest, the excess amount of these contributions over the pension payments made is paid to the participant's beneficiary or estate, whichever is applicable.

If the participant has a spouse at the date of retirement, a joint annuity is payable during the lives of the participant and the spouse. This annuity is reduced by one-third on the death of the participant. This annuity is reduced so that it is actuarially equivalent in value to the pension that would otherwise be payable. This form of payment is also guaranteed so that the total payments are at least equal to the participant's contributions with interest.

This form of payment can be waived if the spouse signs the appropriate waiver form.

7. Termination:

Pension entitlements are protected (vested) for participants immediately (previously 2 or more years of qualifying service required). These entitlements are portable and may be transferred to another pension plan or to a suitable locked-in vehicle. Calculation of a commuted value of pension in respect of service is performed at the time of termination, death, or retirement. A test is made to ensure that the participant's required contributions plus interest (less 10.2% allocated to the Indexing Account) provide no more than 50% of the benefit in respect of eligible service. This test may cause an additional benefit to be paid for such eligible service.

8. Disability:

A participant who has 10 or more years of qualifying service, has not reached age 60 and suffers from a disability may apply for a disability allowance.

If the disability is total and permanent, the participant qualifies immediately for an allowance calculated as a normal retirement pension.

Average annual salaries are determined at the date of disablement.

9. Death:

If a participant dies prior to retirement and has not 10 completed years of qualifying service, the death benefits are equal to the commuted value of the participant's accrued pension. This amount may be paid as an annuity if there is a surviving spouse.

If a participant dies prior to retirement and has completed 10 years of qualifying service, the participant's spouse receives an annuity equal to 60% of the participant's accrued pension. The value of the spouse's annuity must be at least equal to the commuted value of the participant's accrued pension.

If a participant dies prior to retirement and has completed 10 years of qualifying service but there is no surviving spouse, the value of the death benefit must be at least equal to the commuted value of the participant's accrued pension.

If there is no spouse, the commuted value benefit will be paid to the estate. If the participant dies prior to retirement and does not have a spouse, the death benefit is at least the commuted value of the participant's accrued pension.

10. Indexing:

Post-retirement: Increases to pensions in payment of up to 2/3 of the change in the Consumer Price Index (CPI) are granted if there is a sufficient amount available in the Indexing Account and there is an increase in the cost of living. A separate report has been prepared on the Indexing Account. Such amounts are not charged to the basic part of the Fund.

Pre-retirement: Increases to deferred annuities of up to 2/3 of the change in CPI are prefunded on the Valuation Balance Sheet between the date of termination and date of pension commencement. Such amounts are charged to the basic part of the Fund.

11. Valuation Process:

For each event and resulting benefit in the actuarial valuation, we examine the eligibility criteria, benefit amount and maturity value in order to determine the value of that benefit. A description of these items follows:

- Eligibility - benefits usually depend on some combination of attained age and years of qualifying service recognized in the CSSA.
- Benefit Amount - pensions are based on the number of years of pensionable service and the average of the best 5 years' pensionable earnings.
- Maturity Value - a lump-sum cash settlement and/or a pension. If the benefit is a pension, the normal form of payout is life refunding if single. If married, the normal form of payout is joint-life, reducing to 2/3 on the participant's death (actuarially equivalent to life refunding). Other optional forms of payout are available with different death benefits.

Vested and locked-in pensions can be commuted and transferred to a suitable locked-in vehicle.

I. Actuarial Cost Method

The actuarial cost method for the 2017 Valuation continues to be the accrued benefit cost method (ABCM) with salary projection. ABCM anticipates that the current service cost with interest, when added to the opening liabilities, will be sufficient to finance the liabilities at the end of the next year, after reflecting expected retirements, terminations, disablements, and deaths. This method of valuation is used by approximately 90% of defined benefit pension plans in funding their benefit promises. This method is however more sensitive to an aging demographic active population and will result in an increasingly higher current service cost as the population ages. The ABCM method is the preferred method used in the accounting profession for reporting financial obligations of pension plans.

The Fund consists of the accumulation of those contributions and other payments that were made during the period of employment of the present members. This accumulation will be used to finance a portion or all of the benefits which these members have been promised under the CSSA. The portion of the benefits so financed includes:

- 100% of the pensions and other benefits to be paid to employees for service if employed by an employer who matched the contributions made by employees,
- 50% of the pensions to be paid to those employees who are employed by an employer who is not matching employee contributions,
- 50% of the commuted value of pensions or benefits generated as a result of all service,
- 100% of the value of the excess contributions paid by employees as a result of service on or after January 1, 1985,
- the value of employee contributions transferred under reciprocal agreements,
- a specified portion of each pension currently being paid, excluding that part of the pension which is charged to the Indexing Account, plus
- notwithstanding the above cost sharing, the Fund is responsible for 100% of the 0.2% benefit formula improvement, which was effective September 1, 2000.

The remainder of the benefits is financed by the Province of Manitoba and its Agencies on a pay-as-you-go-basis (non-matching) or is withdrawn out of amounts set aside in accounts established within the Fund for this purpose. This actuarial valuation relates to the benefits which accrued during employment and the assets and contributions available to finance these benefits. The portion of the benefits to be financed by the Province of Manitoba and its Agencies by payments to the Fund is not considered to be a liability of the Fund.

Pursuant to CSSA subsection 22(1), employer funding for employees of more than one non-matching Agency shall be on a pro rata basis in accordance with the portion of the amount paid or transferred to the employee in respect of which no employer matching contributions were made effective for events on or after January 1, 1998.

2. Asset Smoothing Adjustment

Calendar Year	Net Investment Income	Rate of Return		Investment Gain/(Loss)	Asset Smoothing Adjustment	
		Net	Assumed		Proportion	Amount
2013	\$ 475,900,000	14.51%	6.00%	\$ 279,111,578	0.00%	\$ -
2014	331,014,000	8.95%	6.00%	109,105,173	20.00%	21,821,035
2015	301,204,000	7.60%	6.00%	63,411,368	40.00%	25,364,547
2016	220,469,000	5.30%	6.00%	(29,118,547)	60.00%	(17,471,128)

Provision for future Adverse Deviation: PfAD						-
Final Asset Smoothing Adjustment 31-Dec-2017: As-Adj+PfAD						\$ 181,787,883

3. Expenses

- Valuation Balance Sheet Reserve

No explicit expense reserve has been held on the going concern Valuation Balance Sheet, but \$23,036,000 has been held in the Solvency Test.

- Contribution Rate Allowance

No explicit expense allowance has been made in the development of the normal actuarial cost of basic benefits.

- Assumed Rate of Return MER

An implicit management expense rate (MER) has been held in the development of the nominal assumed rate of return found as shown below and on the following page.

2017 Expense	Amount	Assets Under	
		Management	MER
Investment	\$ 4,570,000	\$ 4,607,211,000	0.10%
Administration	2,183,000	4,607,211,000	0.05%
Provision for future Adverse Deviation (PfAD)			0.00%
Total			0.15%

4. Development of the Going Concern Discount Rate

The discount rate assumption is 6.00% per year.

The overall expected return (“best estimate”) is 5.72%, which is based on an inflation rate of 2.00%, resulting in a real rate of return on the pension fund assets of 3.72% per year. This best estimate rate of return was developed using best estimate returns for each major asset class in which the pension fund is invested and then using a building block approach, based on the Plan’s investment policy, to develop an overall best estimate rate of return for the entire pension fund. Any additional gains from rebalancing and diversification have been included.

Inflation	2.00%
Real Rate of Return (portfolio policy mix)	3.72%
Overall expected return	5.72%
Expenses	
Investing	(0.10%)
Operating	(0.05%)
Additional returns due to active management	0.05%
Rebalancing and Diversification	0.40%
Margin for adverse deviations	(0.02%)
Discount Rate	6.00%

Given the absence of margin for adverse deviations, consideration should be given to lowering the discount rate in the near future. For this valuation, the 6.00% assumed rate of return should be viewed as a best estimate with no margin for adverse deviations.

5. Assumed Salary Increase Rate

The 2016 general salary increase rate (SINR = inflation plus productivity) has been continued at 2.75% per year as noted below and the service merit and promotional rates (SMP) are also continued for the 2017 Report. The expected SINR exceeds the recent actual SINR (prior to any full-time equivalent annual salary adjustments) and as a result provides a reasonable best estimate of Plan experience plus a possible provision for future adverse deviation (PfAD). In addition, SMP rates start at age 16, are unisex, and reach 0.00% at age 55.

Salary Increase Rate Components	2016 Report	50-Year Average	25-Year Average	2017 Report
Inflation (source CIA Economic Statistics)	2.00%	4.04%	1.77%	2.00%
Productivity (source CIA Economic Statistics)	0.75%	0.76%	0.44%	0.75%
General Salary Increase Rate (SINR)	2.75%	4.80%	2.21%	2.75%
SMP (varies by age as shown in chart below)	1.00%	1.00%	1.00%	1.00%
Total Salary Increase Rate *	3.75%	5.80%	3.21%	3.75%

*To allow for the fact that up to 50 days vacation pay may be used to enhance the best 5 years of salary used in the pension calculation, we have increased liabilities to reflect this effect in part. In future, it may be necessary to increase this allowance.

Males					Females

2018 Expected Average SMP 1.00%

2018 Expected Average SMP 1.00%

6. Indexing

- If retired or eligible to retire

No allowance for post-retirement indexing of the basic benefits in this Valuation. Separately, a report is prepared on the Indexing Account and separate reports for each of the pay-as-you-go employers which allows for some post-retirement indexing.

- Existing deferred pensions during deferral period.

For the 2017 Report, the existing terminated employees who have elected a deferred pension in the Fund continue to have indexation of their otherwise static pension by 2/3rds of the increase in inflation, equal to 1.33% for this Valuation.

7. Annual Employee Contributions Interest Credit

The annual employee contribution interest credit is equal to 4.00% for the 2017 Report. This rate is based on 5-year personal fixed term deposits (CANSIM VI22515, effective May 31, 2010) and generally assumed to be 2.00% lower than the nominal assumed rate of return, currently equal to 6.00%.

8. Annual Rate of Increase in CPP Earnings Maximum

The annual rate of increase in the CPP Earnings Maximum is equal to 2.75% for the 2017 Report. The rate continues to be based on the general salary increase rates (SINR = inflation plus productivity) found in this Report.

9. Rate of CRA Maximum Pension Increase

The rate of increase in the CRA Maximum Pension is equal to 2.75% for the 2017 Report. The rate continues to be based on the general salary increase rates (SINR = inflation plus productivity) found in this Report, after the stipulated rate for 2017 encoded in the Income Tax Act, has occurred.

10. Retirement Rates

The 2016 retirement rates are continued for the 2017 Report. The expected retirements exceed the recent actual retirements and as a result, they may provide a reasonable best estimate of Plan experience plus a provision for future adverse deviation (PfAD). There is some concern that the number of retirements may increase substantially in the future. Rates start at age 55, vary by sex, and reach 100.00% at age 65.

Males				Females

II. Termination Rates

The 2016 termination rates are continued for the 2017 Report. The expected terminations are less than recent actual terminations, which in turn mean that more participants are assumed to continue in the work force and eventually retire, and as a result, they provide a reasonable best estimate of Plan experience plus a provision for future adverse deviation (PfAD). Rates start at age 16, vary by sex, and reach 0.00% at age 55.

Males				Females			
Age	Participants Exposed	Expected Terminations	Expected Rates	Age	Participants Exposed	Expected Terminations	Expected Rates

12. Disability Rates

The 2016 disability rates are continued for the 2017 Report. The expected disablements are greater than the recent actual disablements, and as a result, they provide a reasonable best estimate of Plan experience plus a provision for future adverse deviation (PfAD). Rates start at age 35, vary by sex, and reach 0.00% at age 60.

Males				Females

2018	Expected Total Disablements	110% * 2016 QAI RATE =>	72.37 TESTED

13. Death Rates - Pre-Retirement

The pre-retirement death rates CPM2014PUB-Scale B have been continued for the 2017 Report. The expected death rates are greater than the recent actual pre-retirement deaths, however they are consistent with the more dominant mortality used for post-retirement experience. Rates start at age 16, vary by sex, and reach 0.00% at age 65. We note that lump-sum commuted value payouts are to be prescribed on the basis of the CPM2014COM-Scale B at the valuation date.

Spousal status was assumed where required in calculating pre-retirement death benefits, generally 90% males and 71% females assumed to have a spouse at the higher ages and lower proportions at the younger ages. Spouse age difference was assumed generally to be minus 5 if a male participant and plus 3 if a female participant. All liabilities were valued on a sex distinct basis.

Males				Females			
Age	Participants Exposed	Expected Deaths	Expected Rates	Age	Participants Exposed	Expected Deaths	Expected Rates

2016	Actual Male & Female Deaths	37	36.18
2017	Actual Male & Female Deaths	55	55.00
2018	Expected Total Deaths	CPM2014PUB SCALE B =>	69.63 USED

14. Death Rates - Post-Retirement

The post-retirement death rates CPM2014PUB-Scale B have been continued for the 2017 Report. The expected death rates are less than the recent actual post-retirement deaths, and as a result, they provide a reasonable best estimate of Plan experience plus a provision for future adverse deviation (PfAD). Rates start at age 16, vary by sex, and reach 100.00% at age 115. We note that lump-sum commuted value payouts are to be prescribed on the basis of the CPM2014COM-Scale B at the valuation date.

Exact spousal status and spouse age were used for those pension options that were joint or for survivor pensions in payment. All liabilities were valued on a sex distinct basis.

* The Plan is exempt from the funding requirements of the solvency test pursuant to Paragraph 4.5(2)(b) of the Regulations to the Manitoba Pension Benefits Act. However, it is a requirement of the Canadian Institute of Actuaries to report the wind-up position.

Development of the Annuity Purchase Rate - Non-Indexed

On March 5, 2018, the Canadian Institute of Actuaries (CIA) released an Educational Note “Assumptions for Hypothetical Wind-Up and Solvency Valuations with Effective Dates between December 31, 2017 and December 30, 2018” outlining how to determine the annuity purchase rate to be used for solvency valuations as at December 31, 2017. The cost of purchasing non-indexed annuities would be estimated based on the following process:

Determine the duration of the portion of the liabilities assumed to be settled through the purchase of annuities, based on a discount rate of 3.02% (CANSIM V39062 plus 80 bps at December 31, 2017).

Liabilities were calculated for the members who were retired as at December 31, 2017 using a discount rate of 3.02% and 3.03% to determine the duration.

Using these liabilities, duration was determined to be 11.12 for this group of members retired. To determine the spread above the unadjusted CANSIM V39062, we interpolated using the following table:

Illustrative Block	Duration based on 3.02% discount rate	Spread above unadjusted CANSIM V39062
Low Duration	8.6	+ 70 bps
Medium Duration	11.1	+ 80 bps
High Duration	13.6	+ 90 bps

The spread calculated was 0.80%. Therefore, the CANSIM V39062 as December 31, 2017 (2.22%) plus the spread (0.80%) is equal to the Annuity Purchase Rate of 3.02%.

Development of the Cash Settlement Rate - Non-Indexed

The discount rates for cash settlements in the solvency valuation are based on the same rates that are used for the commuted value calculations including the 1-month lag as required by the Canadian Institute of Actuaries (CIA) standards. Effective for events commencing in October, 2015, the CIA standards utilize the CPM2014COM-Scale B, and the dual interest rates, one applicable to the first 10 years and the other applicable thereafter. These rates are based on the following CANSIM series and formulas:

Lump Sum Formula	Solvency Spot Rate	Solvency Used Rate
CANSIM VI22542 NOVEMBER, 2017 RATE (i_7) =	1.72%	n/a
CANSIM VI22544 NOVEMBER, 2017 RATE (i_L) =	2.23%	n/a
First 10 Years: = $i_7 + 0.90\%$ =	2.62%	2.60%
After 10 Years: = $i_L + 0.50 * (i_L - i_7) + 0.90\%$ =	3.39%	3.40%
